DOCENTE: LUCIANO ANDRE CARVALHO REIS

DISCENTE: GABRIEL ALVES DE OLIVEIRA

SALA: 317

## **MATEMATICA**

SEMANA 20

$$\textcircled{1} \quad A_c = \frac{360}{12} = 30 \quad \left\{ \quad A_i = \frac{180(n-2)}{12} = \frac{180 \cdot 10 - 1800}{12} = 150 \right.$$

Resposta:  $A_c = 30^\circ$ ;  $A_i = 150^\circ$

$$\textcircled{2} \quad 201 = 5, \quad 180(n-2) = 180 \cdot 12 = 3240$$

Resposta: 3240

$$\textcircled{3} \quad A_i = \frac{180(n-2)}{n} \quad \text{Resposta: } \frac{180(n-2)}{n}$$

$$\textcircled{4} \quad S = \frac{180(n-2)}{2} \quad \text{and} \quad SE = 360$$

$$180(n-2) = 360$$

$$180n - 360 = 360$$

$$180n = 360 + 360$$

$$n = \frac{2 \cdot 360}{180} = 12 \text{ lados}$$

Resposta: Dodecágono

$$\textcircled{5} \quad d = \frac{n(n-3)}{2} \quad d = \frac{2 \cdot n(n-3)}{2}$$

$$4d^2 - 8d = 0 \quad 2d = 0 \quad \text{ou} \quad 2d - 4 = 0$$

$$2d(2d-4)$$

$$\text{lado} = 2 \cdot d$$

$$2 \cdot 2$$

$$4$$

Resposta: 4

$$\textcircled{6} \quad A_i + A_c = 180$$

$$3A_c + A_c = 180$$

$$A_c = \frac{180}{4} = 45$$

$$A_i = 3 \cdot 45$$

$$A_i = 135$$

$$135 = \frac{180(n-2)}{n}$$

$$135n = 180n - 360$$

$$135n - 180n = -360$$

$$45n = 360$$

$$n = \frac{360}{45} = 8 \text{ lados}$$

$$45$$

Resposta: (C)
